Additions and Corrections

2001, Volume 35, Pages 1367−1372

Janick D. Lalonde,* Marc Amyot, Anne M. L. Kraepiel, and François M. M. Morel: Photooxidation of Hg(0) in Artificial and Natural Waters

Page 1372. In the first paragraph, the piston velocity should be 1 cm h^{-1} (not 1 m day^{-1}), the calculated Hg volatilization flux should be 7 pmol m^{-2} h^{-1} (instead of 7 pmol m^{-2} d^{-1}), and the loss of Hg(0) caused by photooxidation should be 15 pmol m^{-2} h^{-1} freshwater and 40 pmol m^{-2} h^{-1} in seawater (instead of 15 and 40 nmol m^{-2} d^{-1}, respectively).
