Hans Peter H. Arp, Christian Niederer, and Kai-Uwe Goss*: Predicting the Partitioning Behavior of Various Highly Fluorinated Compounds

Wu Yaoping, a PhD candidate from Nanyang Technological University, Singapore, kindly brought to our attention the following misprint: the value of coefficient “a” in eq 4 should be “ 1.84 ± 0.21 ”, and not “ 0.84 ± 0.21 ”. This affects estimations of surface-gas adsorption constants ($K_{i \text{ surf/air}}$) by up to several orders of magnitude. Additionally, in Table S2 of the Supporting Information, the column headings should be Experimental/Predicted and not Predicted/Experimental.
