

Correction to Heteroaggregation Reduces Antimicrobial Activity of Silver Nanoparticles: Evidence for Nanoparticle–Cell Proximity Effects

Khanh An Huynh, J. Michael McCaffery, and Kai Loon Chen*

Environ. Sci. Technol. Lett. **2014**, *1* (9), 361–366. DOI: 10.1021/ez5002177

Supporting Information

In Figure S6b on Page S18 of the Supporting Information (SI), the *P* value obtained from the unpaired and one-sided *t*-test on the number of viable bacteria present in the suspensions containing heteroaggregates formed at HemNP/AgNP ratios of 2.2 and 0.0 was 0.06 but was misstated as “< 0.05”. Additionally, the caption of the same figure misstates that “Six measurements were conducted for each HemNP/AgNP ratio”; it should rather read that “At least five measurements were conducted for each HemNP/AgNP ratio.” These errors do not alter the discussion or conclusions presented in the article. A revised Figure S6b and Figure S6b caption are included in the corrected SI.
