

Correction to “Fluorescence Intermittency from the Main Plant Light-Harvesting Complex: Sensitivity to the Local Environment”

Tjaart P. J. Krüger, Cristian Iliaia, Leonas Valkunas, and Rienk van Grondelle*

J. Phys. Chem. B **2011**, *115* (18), 5083–5095. DOI: 10.1021/jp109833x

1. The error margins displayed in Figure 12 are based on miscalculated values. The correct 2σ deviations are included in the figure below.

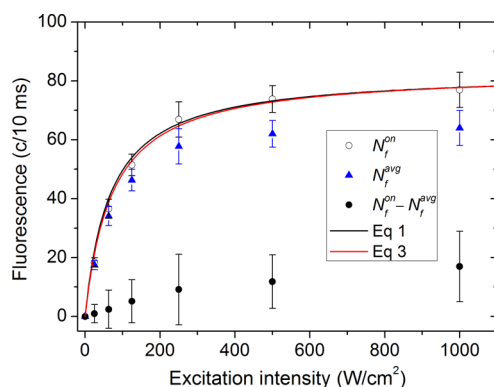

Figure 12. Fluorescence saturation curve of the average measured emission in *on* states (open circles), all intensity states (blue triangles), and the difference between these values (filled circles).

2. Additional information is required for Figure 11. The unit of the y -axis of Figure 11E is seconds and that of Figure 11F is $(10 \text{ ms})^{-1}$. In addition, the kinetic rate constants displayed in Figure 11F were defined as $k_{\text{on,off}} = 1/\langle\tau_{\text{on,off}}\rangle$.

3. In the Materials and Methods section, the utilized quantities of glucose oxidase and catalase should have the unit $\mu\text{g/mL}$ and not mg/mL , i.e., $200 \mu\text{g/mL}$ glucose oxidase and $35 \mu\text{g/mL}$ catalase.

These errata do not affect the rest of the text or the conclusions drawn in the original article.
