Correction to Overview of Plant Chitinases Identified as Food Allergens

Mariateresa Volpicella, Claudia Leoni, Immacolata Fanizza, Antonio Placido, Elide A. Pastorello, and Luigi R. Ceci*

The correct version of Figure 1 appears below. Correction is required because in the original submission the Roman numerals in the pink boxes were wrong.

Figure 1. Schematic representation of different classes of chitinases of the 18 and 19 GH families. Color code: black = PM, blue = CtBM, green = LM, red = CM, and pink = surface loops. In order to adhere to previous literature, classes and surface loops have been both indicated with Roman figures, but italic font has been introduced for loops. Lengths of structural modules and positions of surface loops are only indicative. Adapted with permission from ref 24. Copyright 2009 Springer.
